API Document

Auth (user)

- POST /api/auth/register — {name,email,password} -> 201 + token
- POST /api/auth/login — {email,password} -> token

Products

- GET /api/products — query:
  ?q=shirt&category=Men&size=M&min=20&max=100&page=1&limit=10
- GET /api/products/:id — product detail

Cart

- GET /api/cart — get current user's cart (or from cookie/localStorage for guest)
- POST /api/cart — add item {productId, size, qty}
- PUT /api/cart — update qty or size
- DELETE /api/cart/:itemId — remove item from cart

Orders / Checkout

- POST /api/orders/checkout — mock checkout: create Order, clear cart, send email
- GET /api/orders — list user orders
- GET /api/orders/:id — order detail
